

# Why become a Sound Therapy SYNERGY Consultant

Using the latest neuroscience technology, Sound Therapy is transforming people's lives to live more of their potential.

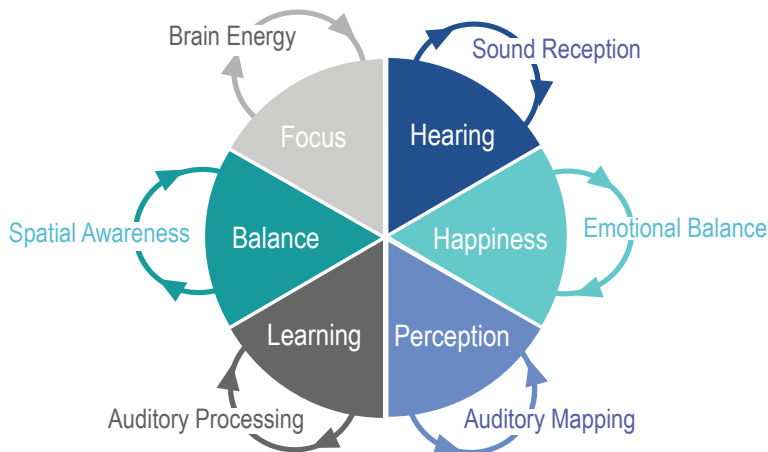

Sound Therapy International is seeking practitioners with a passion for making a difference to the wellbeing of others. Sound Therapy is a complementary method that can be used alone or easily integrated with other modalities.

## What is Sound Therapy?

Sound Therapy is a portable listening program which enhances ear and brain function. It uses spectrally altered (filtered) sounds to enhance neural plasticity and brain integration. It is based on the proven science that music can be used to stimulate new brain pathways. The program has evolved over 70 years of development by pioneering scientists in the fields of medicine, psychology and music therapy.

## Who is Sound Therapy for?

Sound Therapy is of particular benefit to both adults and children seeking help for ear related, stress related or learning related issues. These include: Tinnitus, Dizziness, Hearing difficulties, Anxiety, Insomnia, Fatigue, Learning difficulties, Auditory processing problems, Sensory processing disorder, Speech problems, Autism, ADHD, Dyslexia, Brain developmental issues and more.

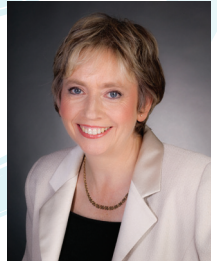

## Do a short course and add Sound Therapy to your practice

- Take our 6 hour self study course
- Register as a Sound Therapy consultant
- Help your clients to achieve better ear and brain health for life
